DETAILED ACTION

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 20-35 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 0f of U.S. Patent No. 6,435,023. Although the conflicting claims are not identical, they are not patentably distinct from each other because they are both directed to heating resistor type air flow meter with similar limitation including two resistors and means for measuring the difference of the output signals as the final result and other signal analysis and manipulations.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 20-24, 27-28, and 34-35 are rejected under 35 U.S.C. 102(b) as being anticipated by Losing et al.

Regarding claim 20, Losing et al., discloses an air-mass sensor with features of the claimed invention including a couple of heating resistors installed in a air passage with a microprocessor capable of providing a vast variety of signal analysis including outputting a signal indicative of the difference of the heating resistor signals.

Regarding claim 21, the correcting method does not contribute to the structure of the apparatus claim, therefore, is not being given substantial patentable weight.

Regarding claim 22 the resistor are positioned in close proximity.

Regarding claims 24, and 34-35, Losing et al., shows two independent circuits.

Regarding claims 27-28, Losing suggests the provision of fuel injection control (see, for example col. 12, line 44).
